Mr. Thomas Cavanagh
Land Pollution Control
Illinois Environmental Protection Agency
2200 Churchill Road
Springfield, Illinois 62706

Dear Mr. Cavanagh:

During a recent visit to your office, I requested permission to include lime sludge generated in our water softener process with fly ash in our existing land fill. You advised that tests were necessary for heavy metals in the lime sludge although the values would probably be low because we are treating lake water. I am attaching two copies of an analysis run by TENCO, an outside laboratory, which indicate the values are exceedingly low. They advised that they do not run leach tests with numbers this small. I, therefore, request a supplemental permit to incorporate 40 tons of lime sludge per month in our present land fill with 1,200 tons per month of fly ash. I believe our existing permit number is 1977-5-OP.

Very truly yours,

R. S. Snell
Manager Regulatory Compliance
